

ZipNab Business Plan — Bank Funding Package

Prepared for: Chase Business Banking / SBA lending conversation · **Entity:** GetBriefed LLC d/b/a ZipNab (51% Sompriya Chanda — women-owned; 49% co-founder) · **Ask:** \$50,000 SBA-guaranteed facility (structure options in §7) · **Date:** July 2026

1. Executive summary

ZipNab is a hyperlocal delivery marketplace: buyers see live prices at every grocery/ general-merchandise store within 10 miles, and independent-contractor Runners purchase and deliver the cheapest basket in under an hour. Revenue = 5% platform fee on every order. No inventory, no warehouses, no employees at launch, no receivables — a working-capital-light model. The software is complete (34 automated tests, Prop 22 compliance engine built), soft launch is underway in the Tracy/Mountain House corridor with \$5,000 of founder capital; this facility funds the proven-playbook expansion, not product development.

2. Problem & solution

Grocery prices for identical items vary 15–30% between stores in the same town, but no delivery service exposes it — incumbents (Instacart, DoorDash) mark up shelf prices and hide comparisons. ZipNab shows the shelf price, the source, the timestamp, and ranks stores by true total cost. The buyer saves money on the basket, which self-funds the delivery fee — a structurally different value proposition than "convenience at a premium."

3. Market

San Joaquin County: ~800k residents, ~\$2.4B annual grocery spend. Serviceable corridor launch market (Tracy/Mountain House/Stockton): ~450k residents. US online grocery: >\$100B and growing double digits. Wedge: Central Valley suburbs where Instacart coverage is thin and price sensitivity is high.

4. Business model & unit economics (measured, not projected)

Per average order (\$35 basket): buyer pays ~\$43.24; platform fee (5%) = **\$2.16 revenue**; after Stripe processing ≈ **\$0.51 contribution per order**, rising to \$1.17 at a \$60 basket. Runner earns markup + delivery fee (\$7.60) and is guaranteed California's Prop 22 floor by our built-in compliance engine — a de-risking most small competitors lack. Take-rate levers already shipped: minimum basket, small-order fee, surge share.

5. Traction & assets (as of filing)

Complete production codebase (web, iOS/Android, price engine covering Kroger/Walmart/ SerpAPI-licensed sources) · Prop 22 engaged-time compliance implemented · legal package drafted (ICA, ToS, privacy, licensing matrix) · launch playbook + 20-city expansion model. Post-launch, this section is refreshed weekly from live metrics (orders, GMV, retention, CAC) via the built-in metrics endpoint — lender reporting is automatic.

6. Use of funds (\$50,000)

Use	Amount	Purpose
City launch marketing (2 cities × \$15k)	\$30,000	Proven corridor playbook, CAC-gated (\$8 kill rule)
Runner incentive float	\$8,000	Signup bonuses recouped by order volume
Insurance (occupational-accident + cyber/E&O year 1)	\$6,000	Prop 22 + platform coverage
Working capital & compliance filings	\$6,000	Licenses, registrations, contingency

7. Funding structure options (discuss with banker)

1. **SBA 7(a) Small Loan / SBA Express** up to \$50k — likeliest fit; women-owned business may also qualify for SBA Community Advantage-successor programs and Chase's women-owned-business initiatives. Expect personal guarantee.
2. Chase Business Line of Credit — typically wants 2+ years in business; position as follow-on after 12 months of statements.
3. Chase Ink Business credit card (\$0 to open) — bridge for marketing spend day one. Realism note: a pre-revenue LLC will be underwritten on the guarantors; keep the ask at \$20–50k, SBA-backed, and bring the live traction dashboard to the meeting.

8. Financial projections (conservative case, from docs/finance/cashflow.md)

	M3	M6	M12
Orders/day	40	180 (3 cities)	900 (6 cities)
GMV/mo	\$52k	\$234k	\$1.17M
Platform revenue/mo	\$2.6k	\$11.7k	\$58k
Contribution/mo	\$0.6k	\$2.8k	\$14k
Break-even on fixed costs (~\$800/mo incl. debt service on \$50k) at ~55 orders/day.			
Upside case (VC-scale, 20 cities) in cashflow.md shows the \$1M/mo revenue path.			

9. Management

Sompriya Chanda — Managing Member (51%), operations & compliance. Co-founder (49%) — product & engineering. Advisory: outside counsel (gig-economy/employment), CPA for 1099/tax posture. Certifications planned: WOSB (SBA) and CA WBE — unlock supplier- diversity partnerships with grocery chains.

10. Risks & mitigations

IC-classification challenge → Prop 22 compliance engine + conservative ICA (built) · price-data access → 5 redundant sources, no scraping · incumbent response → price- transparency positioning is defensible only with density; hence corridor-first strategy · key-person → both members active, code documented and CI-tested.

Draft prepared for lender discussion; figures marked "measured" come from the shipped pricing engine, others are projections. Review with your CPA before submission.
